

AT THE EDGE OF THE CITY AND
THE HEART OF EVERYTHING

February 28, 2020

Dear Shorewood Resident/Property Owner:

The long-awaited 2020 Street Reconstruction program is just around the corner. A contract for this work has been awarded to Stark Pavement Corporation. The project is tentatively scheduled to begin in mid-March.

A map of this year's project area can be found on the reverse of this letter. The project includes reconstruction of the following street segments:

- 4000 – 4300 blocks of N. Larkin Street
- 4200 – 4400 blocks of N. Newhall Street
- 1300 – 1400 blocks of E. Lawnwood Court
- 1500 – 1700 blocks of E. Marion Street
- 1700 – 1800 blocks of E. Olive Street

In addition to street reconstruction, all driveway aprons and carriage walks (between the curb and sidewalk) will be replaced as a part of the project. The project will also include replacement of selected water main and the Village-owned portion of the lead services on those mains. Properties affected by the water main replacement have received separate notification.

2020 Road Reconstruction Public Information Meeting
Thursday, March 12 7:00 PM • Shorewood Village Center

Enclosed, please find a handout with general information related to the project. Please keep this sheet for future reference. Also enclosed are construction parking permits. Please keep these permits – they will permit you to park your vehicles on the street during the time which driveway is replaced.

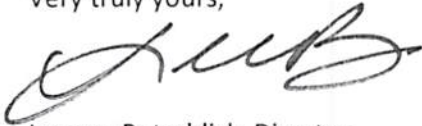

Over the next several weeks you may notice activity in the project area, including more-frequent-than-normal utility location markings and the marking and removal of certain ash trees in advance of the project; please see the enclosed flyer for more information on the ash replacement program. Please note that property owners are responsible for marking – for the duration of the project - any existing private irrigation systems, underground fence systems or landscape lighting systems which may be located between the sidewalk and the curb. **Neither the Village nor the contractor will be responsible for any damage to such systems in the Village right-of-way, but care will be taken to avoid marked systems when possible.**

If you have placed plant materials between the sidewalk and curb, any plantings you wish to preserve must be removed from this area and relocated prior to the start of construction.

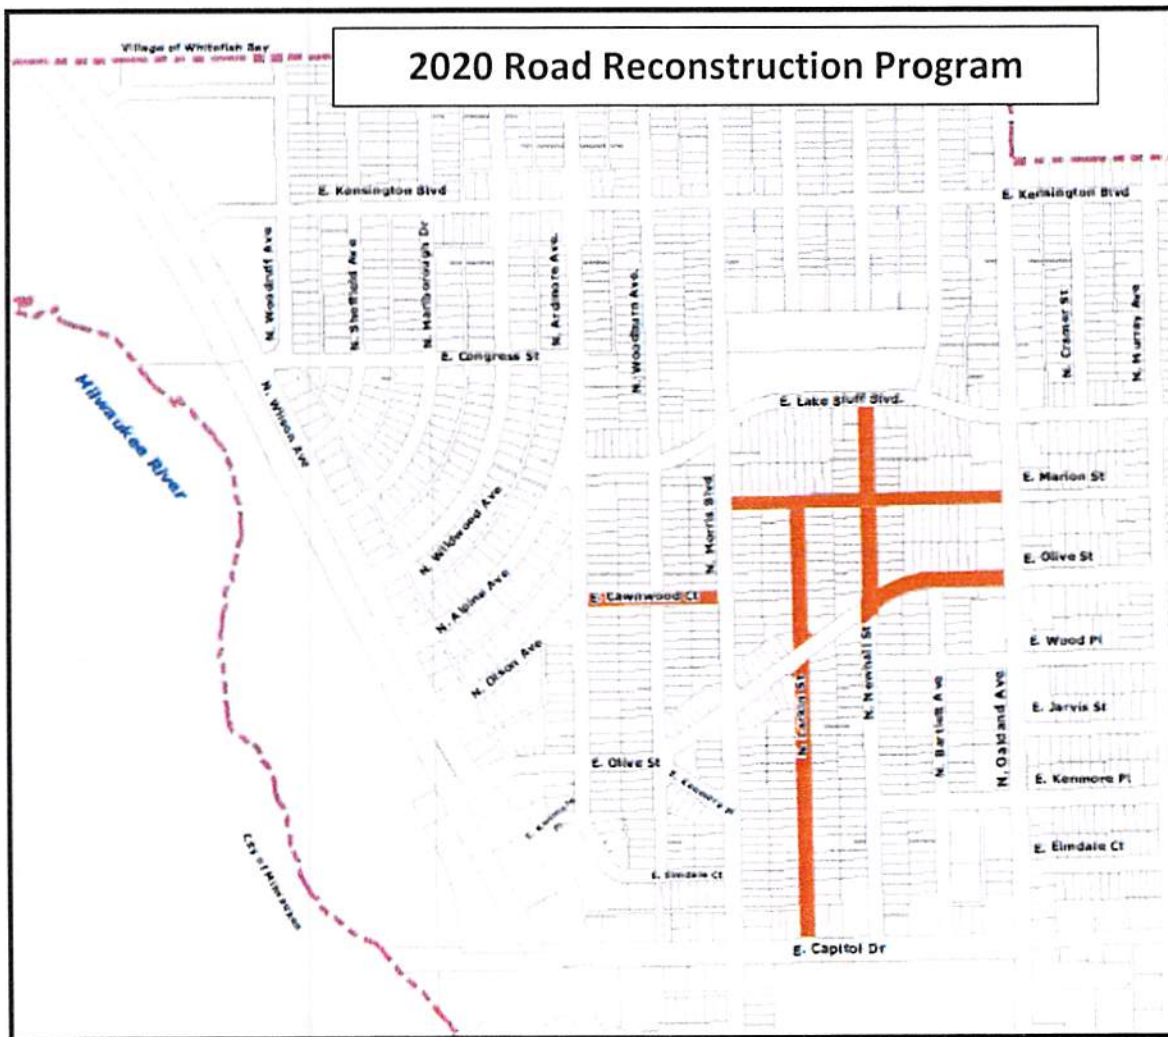

Information regarding the project, including weekly updates once construction begins, can be found at www.villageofshorewood.org/2020roads. You may sign up to receive weekly project notifications at www.villageofshorewood.org/notifyme.

If you have any immediate questions regarding the project, please contact me at the Department of Public Works, 414.847.2650.

Very truly yours,

Leeann Butschlick, Director
Department of Public Works

2020 Street Reconstruction Program

Resident Information Sheet

- It is anticipated that work on the project will begin in mid-March. By Village ordinance, the contractor's work hours are limited to 7:00 a.m. to 6:00 p.m. Weekend work is permitted only with special permission from the Village.
- Mail service, garbage and recycling pickup will be maintained throughout this project.
- **Selected ash street trees will be replaced as a part of this project. If the tree adjacent to your residence is scheduled for replacement, it will be marked and you will receive a separate notification.**
- Streetlight outages will occur periodically throughout the project. The contractor and Village staff will make every effort to keep these unavoidable outages to a minimum.
- Water service will also be interrupted in certain locations during the water main portion of the project. Affected residents will be notified in advance of any shut off.
- Access to your driveway will be limited at times. During construction hours, street parking will be restricted. We ask that vehicles park on streets outside the project area. For the safety of residents and work crews, parking restrictions will be enforced; it is crucial that access is maintained for emergency vehicles at all times. **On-Street Parking Permits are enclosed – these permits are valid ONLY during the time which access to your driveway is restricted due to its replacement.**
- Property owners are responsible for marking any existing private irrigation systems, underground fence systems or landscaping lighting systems which may be located between the sidewalk and the curb throughout the duration of the project. **Neither the Village nor the contractor will be responsible for any damage to such systems in the Village right-of-way, but care will be taken to avoid marked systems when possible.**
- **Parkway plantings (ANY plant material other than street trees between the sidewalk and the curb) which you may wish to preserve MUST be removed** from the area prior to the start of construction. Neither the Village nor the contractor will be liable for damage to these plantings.
- Please keep children and pets away from the work area and equipment at all times. Please keep a safe distance from all equipment.
- Additional notices updating specific information as needed will be forwarded as necessary.
- Regular updates on the project will be posted at www.villageofshorewood.org/2020roads or to receive these updates via email, please visit www.villageofshorewood.org/notifyme.
- If you have any questions regarding the project, please contact the Department of Public Works at 414.847.2650.

Village of Shorewood Ash Tree Replacement Program

Did you know that the Village of Shorewood has over 6,200 street trees? Or that about 25% of those are threatened by the Emerald Ash Borer? The Village began planning for an EAB infestation in 2009. The beetle has been found in communities to the north, west and south of Shorewood. In 2016, EAB was confirmed in a privately owned tree in the northeast area of the Village.

Shorewood began an ash tree treatment program in 2010, utilizing a trunk-injected compound that has been shown to have 99% EAB control. Each year, DPW forestry staff identifies 200-300 of the Village's largest ash trees for treatment, which is needed every 2-3 years. Since 2014, Shorewood's fight against EAB has also included the removal and replacement of selected ash trees in conjunction with major infrastructure improvement projects like the 2020 Road Reconstruction Program.

The policy adopted by the Village Board as part of its EAB readiness program calls for the removal of any ash tree in a construction project area that is in fair or poor condition, as well as the removal of all European and green ash with a diameter at breast height of 24" or less. In addition, trees that are unlikely to survive following disturbance from construction activities will also be removed.

Why is this program necessary?

It is estimated that more than 50 million ash trees are dead or dying throughout the Midwest due to the emerald ash borer. EAB has been detected in communities in Milwaukee, Ozaukee, Washington, Kenosha, Racine and Walworth counties. A proactive approach to target the pest will minimize the economic, aesthetic and ecological impacts of an Emerald Ash Borer infestation on the Village of Shorewood.

Toledo, Ohio. Left: Before EAB June 2006. Right: Peak EAB June 2009.

Why are only ash trees being removed?

The emerald ash borer, a beetle native to East Asia, feeds **only** on ash trees. Once the pest attacks, it typically kills the host tree within 2-4 years.

If trunk injection is so successful, why don't you treat all ash trees?

Treatment of ash trees is just one tool in the fight against EAB. And while very effective, it is not without cost. Injections are required every 2-3 years. It is far more cost effective to replace the smaller trees with other species and further diversify our urban forest. The chemical treatments are being used as a strategy to manage the ash population's decline over a longer time period in order to minimize, to the extent possible, the effect of an infestation on Village resources.

How will I know if my street tree is an ash tree selected for replacement?

Prior to the start of the larger construction project, every ash tree identified for replacement will be clearly marked. Additionally, the adjacent property owner/resident will receive a door-hanger notification about the program.

When will my tree be replaced?

If the street tree adjacent to your residence has been identified for replacement under this program, the tree will be removed in the earliest stages of the construction project. The replacement tree will be planted in the latter stages of the project with the other landscape restoration work.

What type of tree will be planted as a replacement?

Shorewood's Forestry Department has selected a replacement tree based on a variety of characteristics unique to each planting site. Through careful selection of replacement trees, we are able to build an increasingly diverse urban forest which will prove more resilient against future pest invasions.

How can I find out more?
